

## TACTICAL SHIELD

The NIJ level 3A tactical shield was designed in collaboration with police and intervention teams and therefore has excellent ballistic properties.

The shield is light in weight, practical in use and can be deployed quickly in case of interventions and arrests when working in a team.

The bulletproof window has a good multi-hit performance and offers a wide viewing angle in all directions. It has excellent "non-spall" (no fragmentation) properties, because it was manufactured from multiple layers of laminated plastic.

The curved design of the tactical shield increases the ballistic performance and there is no deformation during mechanical stress. The main construction is made from high quality thermoplastic materials, like lightweight UHMWPE armour. The shield has an innovative hand grip that eases the use of the shield both in static position and in combat situations with a high threat level.

The used composite material guarantees a high 'stop value' of bullets and fragments. The used basic materials are 25% lighter than conventional materials that are processed axially.

Due to the high stiffness the Shield will hardly deform in case of a possible bullet impact.

## TECHNICAL SPECIFICATION

Material	High-performance cross-ply PE
Protection level	NIJ Level3A: .44 Mag, 9x19mm Ball 9x9mm Action Effect, .357 Mag.
Thickness	8 mm
Weight *	8 kg
Finishing outside	HDPE film
Dimensions (max.)	1150 x 650 mm

\*Weight: excl. viewing window & LED lighting

## OPTIONAL

- Integrated dual high-power LED lighting
- Shield can be equipped with bulletproof viewing window
- Modifications: within the dimensions of 1.150mm x 650mm.
- Hand grip on the inside at the desired position
- Outside finished in various materials (such as laminated carbon or printed film with logos, features or markings).
